

Nasrin Kunhimoidu

Target Role: Project Manager – IT

Kerala, India · +91 9072818241 · nasrin.kunhimoidu@gmail.com

PROFESSIONAL SUMMARY

MCA student and BCA graduate with academic project experience developing integrated web applications using Python, Django, and Flask. Projects address airport operational coordination and immigrant service needs through centralized dashboards, application tracking, secure document storage, and decision support. Brings practical experience in end-to-end administrative processing, progress tracking, management coordination, documentation, and issue resolution. Interested in contributing to digital project delivery and IT solutions that improve business processes and user experience.

SKILLS

Software Development	Python · Django · Flask · Web Application Development · Software Engineering
Solution Features	Integrated Web Applications · Role-Based Dashboards · Workflow Centralization · Search and Filtering
Project Knowledge	Operational Reporting · Performance Indicators · Decision Support · Scalable Application Design
Data Protection	Project Experience: Secure Document Storage · Data Security · Confidentiality
Coordination	Progress Tracking · Management Coordination · Documentation · Issue Resolution · Timely Updates
Communication	Clear Written and Verbal Communication · Technical Explanation · Remote Collaboration · User Support
Workplace Strengths	Analytical Thinking · Problem Solving · Attention to Detail · Time Management · Teamwork · Adaptability
Office & Collaboration	Microsoft Excel · Microsoft Word · Email · Shared Spreadsheets · Video Conferencing

EXPERIENCE

Mar 2026 – Present	Student Registration Coordinator, Learn by Vajra Office Center · Remote • Manage end-to-end data processing for the registration of 50+ distance education students per month, ensuring accurate data entry and verification. • Coordinate with management to maintain registration status trackers, resolve administrative issues, and keep records current in shared spreadsheets. • Provide clear documentation and timely updates to support a smooth registration process and accurate records maintenance.
Nov 2025 – Present	Online Tutor, Clasps Learn · Remote • Provide one-to-one online tutoring for around 6 students per week, adapting explanations to individual needs and addressing questions clearly. • Use online whiteboards, video calls, and collaboration tools to deliver reliable support and check understanding in a remote setting.

EDUCATION

Aug 2025 – Present	Master of Computer Application (MCA), MES College of Engineering, Kuttippuram KTU University · Kuttippuram • Expected graduation: March 2027 • Key subjects: Python, Software Engineering, Website Development
2025	Bachelor of Computer Application (BCA), Mar Dionysius College, Pazhanji, Thrissur Calicut University · Pazhanji, Thrissur

PROJECTS

Present	AeroNexus – Airport Operations Management System Academic project Python, Django • Developed a web-based Airport Operations Intelligence and Decision Support Platform to centralize fragmented operational information and support administrative decision-making. • Integrated workforce and resource management, incident and emergency management, passenger service requests, and reporting within a unified application. • Provided role-based dashboards for real-time operational visibility, helping administrators monitor airport activities and coordinate across departments. • Implemented an Airport Health Score using predefined operational indicators to summarize performance and support informed decisions. • Designed departmental coordination and reporting features to consolidate operational data, reduce manual coordination, and improve process transparency. • Designed the architecture for scalability and future integration of AI, predictive analytics, and smart airport technologies; these enhancements remain future scope.
Present	KIMS – Kerala Immigration Management System Academic project Python, Flask • Developed an integrated web application addressing job search, accommodation needs, document access, and official inquiries for Kerala immigrants. • Enabled users to search job vacancies, apply for opportunities, and track applications through an interactive dashboard, supporting an organized user journey. • Included a digital wallet for secure document storage and access during job applications and formalities, with emphasis on data protection and confidentiality. • Provided search and filtering options for job listings and accommodation details, alongside an inquiry feature for communication with the Kerala Immigration Department. • Designed the application for scalability and future enhancements such as AI-based job recommendations, real-time notifications, and multilingual accessibility; these remain future scope.
